5.0#/2.27 kgs.

H&L Tooth Company History since 1931:

This fabricated 25HW Heavy Wide Flared tooth was first designed and introduced around 1934. This Flexpin type Tooth was first developed for an upgrade for a Page ¾ Dragline and P&H model 150 Shovel, all before becoming the preferred standard on many models during the late 1930s.

Today, H&L no longer produces the fabricated two-piece 25HW , replacing it with both a forged and cast versions.
