4.3#/1.95 kgs.

*H&L Tooth Company History since 1931:*

*This fabricated 25SP Fabricated Sharp Penetration tooth was first designed and introduced around 1934. This Flexpin type Tooth was first developed for an upgrade for a Page ¾ Dragline and P&H model 150 Shovel, all before becoming the preferred standard on many models during the late 1930s.*

*Today, H&L no longer produces the fabricated two-piece 25SP, replacing it with both a forged and cast versions.*
